Specialized procedure information.

Prep Information for the below procedures will be provided at time of scheduling.

Breast Specific PET/CT

Cerianna (F18 fluoroestradiol) PET/CT Scan for detection of ER+ lesions in patients with recurrent or metastatic breast cancer.

Prostate Specific PSMA PET/CT

PSMA PET/CT is approved for initial staging in men with suspected metastasis who are candidates for therapy and for suspected recurrence based on elevated PSA levels.

Neuroendocrine Tumor PET/CT

Dotatate PET/CT scan for evaluation and staging of neuroendocrine tumors (NETs).

Brain PET/CT - Metabolism

FDG PET/CT scan of the brain to visualize metabolic activity. Most frequently used for Epilepsy, Dementia, and Brain Tumor.

Brain PET/CT- Amyloid

PET/CT scan of the brain used for evaluation of Alzheimer's to visualize amyloid plaque.
